

The Sustainable Development

Vardhman is India's largest vertically integrated textile manufacturer with multiple production facilities across India. As the firm wants to stay ahead on the sustainability curve and be an active participant in shaping the world we want, we had this conversation with Mrs. Suchita Oswal Jain, Vice Chairman and Joint Managing Director, Vardhman Group. Here are the excerpts –

Suchita Oswal Jain, Vice Chairman and Joint Managing Director, Vardhman Textiles with Shri S. P. Oswal, Chairman and Managing Director, Vardhman Textiles.

WHAT ARE YOUR SUSTAINABILITY GOALS?

We have a dedicated framework to guide our Sustainability initiatives and achieve our Sustainable Development Goals. We have identified 10 SDGs namely

- Water – Reduce consumption of freshwater and rejuvenate sources
- Energy – Decouple growth from energy consumption and shift to greener sources
- GHG emissions – Minimize emissions and contribute to mitigation of climate change
- Waste – Minimize, reduce and upcycle waste to reduce the burden on landfill
- Raw material – Enhance traceability and use of ethically & sustainably sourced raw material
- People – Work conditions that inspire productivity and training programs that accelerate holistic development
- Community – Empower the marginalized by mainstreaming them in the formal economy
- Chemicals – Eliminate hazardous chemicals from all processes and adopt green chemistry
- Collaboration – Leverage access and competencies to help customers reach their sustainability goals
- Product – Responsible fashion and transition to a circular economy

We have a dedicated framework to guide our Sustainability initiatives and achieve the following Sustainable Development Goals:

- Water – Reduce consumption of freshwater and rejuvenate sources
- Energy – Decouple growth from energy consumption and shift to greener sources
- GHG emissions – Minimize emissions and contribute to mitigation of climate change
- Waste – Minimize, reduce and upcycle waste to reduce the burden on landfill
- Raw material – Enhance traceability and use of ethically & sustainably sourced raw material
- People – Work conditions that inspire productivity and training programs that accelerate holistic development
- Community – Empower the marginalized by mainstreaming them in the formal economy
- Chemicals – Eliminate hazardous chemicals from all processes and adopt green chemistry
- Collaboration – Leverage access and competencies to help customers reach their sustainability goals
- Product – Responsible fashion and transition to a circular economy

WHAT IS THE EFFORT YOU ARE MAKING TO REDUCE CARBON FOOTPRINT?
