

ESG performance across its value chain.

NOP's first sustainability report for the period 1st April 2019 to 31st March 2022, is prepared in accordance with the core criteria of Global Reporting Initiative (GRI) standards, comprising of globally established sustainability reporting requirements. The report contains quantitative and qualitative information addressing the ESG interests of various stakeholders, including shareholders, regulators, customers, employees, and industry bodies, among others. The report not only showcases NOP's initiatives and achievements in the reporting year, but its roadmap for the future as well as.

Wise in Water Use

According to a NITI Aayog report, 2018, India's access to water shows that 600 million people or nearly half the Indian population live under extreme water stress. Recognizing that water is a shared resource, for use not only in NOP's own properties but also by the communities in its neighbourhood, Nucleus office Parks has committed to use scarce resources, responsibly.

Thus, water conservation is a core area of sustainability at NOP. Water is used efficiently to reduce consumption at all the asset locations. Recycling, reuse of water and rain water harvesting are the other water conservation initiatives by the company.

NOP is also committed to computing and monitoring its water usage, promoting rational and sustainable use of water aligned to NOP's goals and targets, which gets its water supplies from multiple sources. NOP also implements technology-based tools and best practices to monitor water consumption, save water loss and improve efficiencies. Such initiatives significantly reduces water consumption.

Clean Energy & Climate Change

India has committed to reduce and gradually phase out its dependency on depleting fossil fuel such as coal by expressing its resolve to enhance reliance on renewable energy sources at various international climate forums/coalitions.

In its endeavour to combat climate change, NOP has adopted a persistent approach on increasing energy efficiency and enhancing use of renewable energy across all its assets. In the current reporting year, almost 60% of power consumed in NOP's portfolio was from renewable energy sources. Several of NOP's assets have already signed long-term agreements for procurement of renewable energy from third-parties. Also, the entire portfolio of NOP's operational assets are LEED O+M v4.1 certified and operate at high

"We have devised a cohesive ESG framework founded primarily on four pillars – ecosystem, human capital, community, and governance. Moreover, we have identified a combination of long-term pledges with short term milestones to ensure we achieve our vision and create a lasting impact."

Quaiser Parvez, CEO, Nucleus Office Parks

levels of energy efficiency while building sustainable cities and communities.

At NOP, the endeavour is to contribute to achieving the national target by steadily increasing usage of renewable energy in its overall energy mix. NOP's 3 assets in Bengaluru and Kosmo One in Chennai meet a major part of their total energy demand through renewable sources. Likewise, 2 other assets, One BKC and Prima Bay will soon be powered by renewable energy. One BKC (Mumbai) and Concept Tech Park (Gurgaon) have rooftop solar panels of 80 KW and 50 KW, respectively.

Reduce, Reuse, and Recycle of waste

Recognizing that operating buildings generate significant quantities of waste, Nucleus Office Parks has implemented a holistic waste management program that derives from the circular economy principles of reduce, reuse, and recycle. NOP's waste practices in this respect are also aligned with applicable waste management regulations. The waste management approach aims at minimizing waste through re-use and recycling, besides collection, segregation and storage of all solid wastes which are stored in suitable bags or containers where ever practicable. Another important aspect that is strictly adhered to is to only engage authorized partners with proven experience and infrastructure for safe transport and/or disposal of wastes. To ensure the effective implementation of these procedures, training is imparted for all personnel who are responsible for the waste management. The importance of segregating waste at the point of origin to prevent the need for further segregation later is a smart practise at all the sites of NOP assets. Lastly, but the most important aspect of waste management is carrying out audit trail of waste generated, storage and disposal which is done on a periodic basis to establish regulatory compliance and conform with best practices.

Another critical aspect of waste management is the handling of the increasing amount of hazardous e-waste. This is a consequence of the rapidly growing reliance on digital technologies and electronic devices yielding large quantities of e-waste which are categorized as hazardous waste by Indian law making it mandatory to manage them safely. At NOP, all categories of hazardous waste are disposed appropriately with the help of authorized vendors. Periodically, the company also submits data to statutory authorities on the hazardous waste generation and its management on its premises as per compliance requirements. Waste identification and classification are overseen by
