“Fund accounting and investment management firms are outsourcing work and setting up their captives here because India is proving to be a safe destination politically and economically.”

There is good news on the salary front, too. India Inc.’s average hike bounced back from 6.1 per cent in 2020 to the pre-pandemic level of 9.3 per cent in 2021, as per rewards firm Aon India’s latest Annual Salary Increase Survey. Employers are expected to hand out an average hike of 9.9 per cent in 2022. But the exorbitant joining hikes seen last year amid the raging talent war is a bubble waiting to burst. “In the last two months, some sanity has come into the tech talent market. Six months back, it was absolutely crazy—unreasonable demands, potential candidates’ opportunistic behaviour... accepting offers and then dropping out,” says HDFC Bank’s Razdan.

Taggd’s Sharma concurs that compensation is all over the place. “As demand-supply normalises and investments into freshers materialise, we will see people get paid as much as they deserve and not more.” Sabharwal, too, sees inflation confusing companies’ salary calculations. Hot as the job market may be, he says, high salaries are a result of inefficiencies in urbanisation, formalisation, financialisation and industrialisation. “We still have 240 million Indians working on the farms. The number should have been 50-75 million at this stage of our development.”

To be fair, the bounce-back is being witnessed in white-collar jobs, while a majority of the 12 million people entering the workforce every year go into the informal sector. The larger economy, too, is in the midst of an unemployment crisis, with CMIE data showing the unem-
