by 2007-08. The plan was shelved with the change of guard at the centre after the GMR Group claimed that a second airport in the NCR would adversely impact traffic and revenues at IGIA, which it operated. In 2010, the Bahujan Samaj Party government in UP tried to revive the project. The villagers' agitation that followed the state government's drive to acquire land along the Yamuna Expressway according to a British-era law ultimately resulted in the central government enacting the Land Acquisition Act of 2013. The law seeks to pay the affected a compensation of four times the market value of their land in a rural area, and two times in an urban area.

One person who played a key role in reviving the project was Dr Mahesh Kumar Sharma, the BJP lawmaker from Noida, as the Union minister of state for civil aviation (2014-2016). "During a discussion with Prime Minister (Narendra) Modi, I submitted to him that if cities like New York and Washington DC could have three airports each, why couldn't the Delhi-NCR have one more airport?" reminisces Sharma, a qualified physician. Besides Jewar, sites in Bhiwadi (Rajasthan), Rohtak (Haryana) and Agra (UP) were also considered. "After all the feasibility studies were completed, I managed to convince Akhilesh Yadav (then UP chief minister) that an airport in Jewar wouldn't only be more viable, but also a win-win proposition for both the state and centre," he says.

In 2018, the Noida International Airport Co. Ltd was formed to handle aspects like bidding and project management. The state administration then explained the benefits of the project to farmers, who were reluctant to hand over their land. "I told them that it was with great difficulty and after a very long wait that our area would have a transformative infrastructure project. Once the farmers were convinced of the developments that the project would lead to, they came on board," says Dharendra Singh, the MLA from Jewar.
